Your Authority on High Pressure Cleaning

BUY EFI

HOT WATER with a **19 HP KOHLER**
ELECTRONIC FUEL INJECTED
\$1,727.19

is your actual cost after gas savings!

The following savings is based on running an 18 HP carbureted engine under full-load/3600 rpm for 35 hours per week, 52 weeks per year. Doing so you can expect to burn approximately 1.75 gallons of fuel per hour or approximately **3,185 gallons** of fuel per year. Using these figures and factoring in the **27%** fuel savings you can expect to save approximately **\$3267.81** per year.

So - since this machine is on sale for **\$4,995.00** when you subtract the **\$3,267.81** you can see your actual first year machine cost could be **\$1,727.19**. **Then** - after that first year you will be 'sticking' the entire **fuel savings** back where it belongs - *your pocket!*~

HOT WATER with a **29 HP KOHLER**
ELECTRONIC FUEL INJECTED
\$2,308.23

is your actual cost after gas savings!

The following savings is based on running an 30 HP carbureted engine under full-load/3600 rpm for 35 hours per week, 52 weeks per year. Doing so you can expect to burn approximately 2.51 gallons of fuel per hour or approximately **4,568 gallons** of fuel per year. Using these figures and factoring in the **27%** fuel savings you can expect to save approximately **\$4,686.97** per year.

So - since this machine is on sale for **\$6,995.00** when you subtract the **\$4,686.97** you can see your actual first year machine cost could be **\$2,308.23**. **Then** - after that first year you will be 'sticking' the entire **fuel savings** back where it belongs - *your pocket!*~

* This illustration is based on fuel costs of \$3.80 p/g. It is also based on running the engine under *max. rpm - full load* 100% of the time. When applying chems or with the gun released the engine will not be running 'full load.' During this time the savings will not be as high but will still be approximately 27% of the carbureted version running at the same rpm.

**ALLISON COMPENSATING-838
COUNTER BALANCED UNLOADER**

#COMP838
\$79.95

This Allison COMP-838 is a premium replacement for the following unloaders: K-5, K-7 & ZK-1.

How does it work? This EnviroSpec unloader has an internal counterweight that offsets the pressure in the system. When the trigger is pulled slightly the counterweight takes over and gradually engages the discharge pressure.

The new Allison COMP-838 unloader is the newest technology in unloader design. It mounts the same way your existing unloader is installed.

Installs on any pressure washer from 2.75 to 8 GPM and will handle pressures up to 3800 PSI

Allison "Super Suds Sucker"

Up to 33% Draw Rate

For those of you too new or young to remember...

...a few years back we designed a chemical injector that would just about suck the bottom out of the pail. Not only that - we were able to put as much as 500' of hose on the machine and still suck as much chemical as most injectors equipped with only 50' of hose.

Here are the two primary advantages of owning a **Super Suds Sucker** and when you think about it - what else is there?

Longevity - This could be the last injector you will ever buy. Most of the ones we built 10 years ago are still 'sucking' strong.

Product to Surface - When we first came out with this product we told people then that "if you can't get the product to the surface you may as well stay at home" - the same holds true today. With a **Super Suds Sucker** you will definitely get the product to the surface.

What do most people say when they first try it?

NOW THIS SUCKS!

**You really can't afford
NOT TO BUY EFI**

**CLOSED-LOOP EFI ENGINE ACCEPTS
ALL ETHANOL FUEL BLENDS
FROM E10 TO E15**

Overhead valve technology provides greater volumetric efficiency and a higher compression ratio. This produces more power, improved fuel economy and cooling and reduces oil consumption. In addition, there is virtually no carbon buildup, reducing overall maintenance costs. The variable speed, mechanical governor promises smooth performance, regardless of application or fluctuating demands for power.

The only engine in the industry that
***pays for itself
in less than a year!***

If you ran both a 30 HP carbureted engine and a 29 HP KOHLER EFI at *idle speed* 35 hours per week for 52 weeks you would save approximately...

***Save \$1,900.00*
each year!***

*Savings based on gas prices at \$3.80 p/g and operating the engine at full RPM for 35 hours per week.
