

Soap For Hope

is a John & Shelley Allison Charity made possible by EnviroSpec

What do you really know about EnviroSpec?

Meet Suzie who inspired the Allison's to build Suzie's Friends Animal Shelter

Want to see it?
Go to www.suziesfriends.org and 'click' on the video link. You WILL BE touched!

EnviroSpec Is the Industry's Price Leader... AGAIN!

Just when fuel prices surge to all-time highs and just when the buying power of the dollar has reached it's all-time low EnviroSpec has rolled back most pricing to where they were 5 years ago.

And - on top of that - if you should happen to find it for less elsewhere we will beat their price by another 5%. We don't think you will but here is the offer anyway.

Also, remember that 100% of all after tax profits from your purchase go to fund Suzie's Friends Animal Shelter as well as our Spay/Neuter and adoption programs in other communities

Unheard of Quality at unheard of prices!

COOLDRIVE

HONDA
ENGINES

Premium Wheels
Tough powder coated Frame

Distinguishing Features

- Patented Cooling Technology
- Cool Air Ventilation Slots
- Perm-A-Line Belt Tension System
- Laser Aligned Pulley Fanning System
- Quick-Release Belt Guard Knobs
- Flat-Free Foam Filled Tires
- Industrial Aluminum Mags
- Block Mounted Unloader

Last much, much longer with the help of Special Cooling Fins that are attached to the pulley keeping clean, cool air passing over the pump and engine.

Comes standard with **GENERAL PUMPS**

that safely shuts down the engine in the event you leave the machine in by-pass to long causing the pump head to overheat.

PRODIGY

Prodigy is, by far, one of the highest, non-caustic detergent concentrations available in the industry.

Prodigy exhibits excellent wetting, chelating, rinsing, and emulsification properties due to its high concentration of our **SuperFlo Polymer Complex System**. This exotic complex is formulated from a variety of unique dispersants, hydrotopes, and surfactants, which are not commonly found in detergent formulations.

The general rule of thumb in detergent formulation is as follows: Approximately 1 gallon of water will hold approximately 1 pound of powder before separation begins. If your product begins to separate using this method, more often than not, your product has been camouflaged with what is known in our industry as "fillers". Fillers provide little to no value to the products integrity and/or performance. They are used primarily to add weight and increase the bottom line profit for the manufacturer. Using the 1 pound per 1 gallon rule, you can see the potency of **Prodigy** when you consider that we are able to thoroughly dissolve up to 2.3 pounds of **Prodigy** into 1 gallon of water without separation. To our knowledge, no other company can make this claim. The advantage of these concentration levels are twofold: 1) the contractor is now able to clean substrates that normally require the use of caustic cleaners and 2) work faster and safer, which increases your bottom line.

As the leader in contract cleaner formulations, **EnviroSpec** goes to great lengths in providing products that are both environment friendly as well as effective, an attitude not commonly found in such a demanding industry.

Since **PRODIGY** came out in 1986 it has grown to the most asked for **Truck Wash Detergent** in the **Professional Mobile Wash Industry**.

This formula was a result of years of testing by professional mobile washers in the Northeast.

Makes Up to 110 Gallons of Concentrate

#ZPPRO \$98.95 Sale Price \$74.95 (40 Lbs)

MR.MUSCLE

Super Heavy Duty

TRUCK WASH/DEGREASER

Non-Caustic & Phosphate Free

MR. MUSCLE has a 50 pound base of Prodigy, the industry's #1 Selling Tractor/Trailer Wash plus 2.5 Gallons of a unique solvent/surfactant additive that really cranks up the horsepower!

MR. MUSCLE walks circles around all the degreasers found in the marketplace and at a price that is well below what you would expect to pay for such a product.

In addition, you will find **MR. MUSCLE** to work extremely well with both hot and cold water systems. The addition of SpeedX-777 which is part of the liquid additive makes rinsing a breeze.

When you absolutely, positively, without question, have to have the very best and fastest degreaser on the market, *then it's time to pull out all the stops and buy... MR.MUSCLE!*

MR. MUSCLE exhibits excellent wetting, chelating, rinsing, and emulsification properties due to its high concentration of our SuperFlo Polymer Complex System. This exotic complex is formulated from a variety of unique dispersants, hydrotopes and rinse aids which are not commonly found in detergent formulations.

Typical applications for the concentrate are:

Tractor/Trailer Bodies, Engines, Fork Lifts,

Garage Floors, Rail Cars

As a leader in contract cleaner formulations, **EnviroSpec** goes to great lengths in providing products that are both environment friendly as well as effective, an attitude not commonly found in such a demanding industry.

LIMONENE

The Industry's
#1 SELLING
Exterior House Wash

Contains
**Orange Peel Solvents
&Gloss Enhancers**

With the evolution of the environment conscious homeowner more and more contractors are looking for an effective alternative to the less friendly bleach and solvents commonly found in surface chemistry dealing with wood, aluminum and vinyl siding.

These solvents, coupled with specific pH balanced surfactants and builders, provide the contractor with excellent command of the "ever changing" exterior house washing market.

Limonene has excellent hydrotoping characteristics through the use of a unique dispersant complex which is not commonly found in detergent chemistry. This complex, known as **SuperFlo Polymer**, has been developed by EnviroSpec and is found throughout our detergent formulary because of its tremendous emulsifying capabilities.

At the onset of the formulation process we took into consideration that many contractors use cold water pressure washers. Generally speaking, the use of cold water systems will result in a difficult rinsing process with most detergents. You will find that **Limonene** has superior rinsing qualities in both hot and cold water environments. The end result? You will clean faster and safer with **Limonene**.

Limonene is another step that has been taken by EnviroSpec to provide our customer with environment friendly, Top Shelf cleaning products without sacrificing aggressive surface activity required by the professional.

EMULSIFIER PLUS

Bleach Friendly DETERGENT

For the very best of all worlds
add 3 gallons of product to 2 Gallons of Bleach
Contains Gloss Enhancers

Emulsifier Plus - is one of the Original House Wash Formulas developed by EnviroSpec. Knowing that Bleach works better than anything for killing and cleaning Mildew and taking into account that Bleach does absolutely nothing about cleaning carbon type pollutants such as acid rain, exhaust carbons, dirt, grease and grime the dilemma was - how to do both at the same time!

Bleach, for the most part, does not like to be blended with other chemical products and many of the chemical products found in the professional mobile wash industry can create a serious explosive situation when mixed with sodium hypochlorite (bleach). **Emulsifier Plus**, on the other hand, is the answer to both the safety issue as well as the cleaning problem. These two products work extremely well together when blended and applied in accordance with the EnviroSpec instructions. Have the best of both worlds - Clean and Kill Mildew and Clean All the other Pollutants typically found on an exterior substrate. And do it all in one pass!

Emulsifier Plus has a pH of around 11.8 to 12.0 in a 1% solution. This unique blend of Surfactants & Builders has been specifically formulated for the House Wash Industry as a stand alone detergent or a detergent additive to be blended together with Bleach.

Emulsifier Plus works great on removing heavy build-ups of grease, grime and general fallout pollutants generally found in high traffic areas and exhibits excellent wetting, chelating, rinsing, and emulsification properties. Its ability to hold pollutants in suspension during the wash process makes it an ideal product when using either hot or cold water pressure washers.

Emulsifier Plus comes packaged in a single very moist powdered system which is loaded with specialty solvents and gloss enhancers.

12 Volt, High Volume CHEMICAL INJECTOR INDUCTION SYSTEM

The biggest complaints "EVER" with chemical injectors are:

1. With more than 125' of hose they won't draw chemical!
2. Although it is a 20% injector it doesn't draw enough chemical!
3. I wish I didn't have to use a 'pump-up' to apply bleach!

NOW YOUR HEADACHES ARE BEHIND YOU!

The Allison Chem-Inductor which includes the Allison Super Suds Sucker Injector allows you to draw an incredible amount of chemical.

The following test was based on using an injector advertised to draw at 20% (NOT OURS) mounted on a TS-2021 General running at 5.6 GPM.

1. With 100' of hose - Injector Only 63 oz. of chem per min.
2. With 100' of hose - WITH INDUCTOR 204 oz. of chem per min.

Now Check This Out!

3. With 500' of hose - Competitors 20% Injector 0 oz. of chem per min.
4. With 500' of hose - WITH INDUCTOR 204 oz. of chem per min.

This means that regardless of which problem you are having you will still induct almost 2 gallons of chemical per minute into the system. Never again will you have to apply the product 2 or 3 times to get the job done. Now you'll be on your way after the first pass. Roof Cleaners using bleach really love this system. No more 'pump-up' or 'back-pac' sprayers to lug around!

America's Favorite Pressure Washers are now equipped with **HI-TEMP GENERAL PUMPS**

This 'ready to go system' is equipped as follows:

- o 13 HP Engine with easy start and low oil shut-down
- o General Pump with hi-heat system
- o Unloader
- o Safety relief Valve
- o Chemical Injection
- o Gun, Hose & Lance
- o 5 Quick Connect Nozzles
- o 'Tuff-Coat' Frames

These Hi-Temp General Pumps are designed to Shut-down a gas engine in the event the pump head overheats. This is a common occurrence when the trigger is released and the pump goes into by-pass. Typically the pump head will begin to overheat within 3 minutes from the time the trigger gun is released. This will spike the pump head to approximately 150°. Here is where you start losing packing life. Within 4-5 minutes without introducing fresh water into the system you have lost approximately 10-20% of your packing life expectancy. At \$ \$150 to \$400.00 a pump head rebuild you can see where these units will pay for themselves in a short period of time.
