### Clickable Outstanding PO

### Clickable Part Number

Order Next Time means remove this item from this PO completely

Under ADD A Part - the default will be '0' high & '0' low so it will never appear on a PO unless we manually change those quantities in the future. However, even if defaulted to '0' and a customer orders one it will appear on the PO the next time we order from that Vendor. This concern will probably be handled automatically by the 'OverrideAutoLevels' feature anyway.
