DISTRIBUTED BY:

CLEANER & RESTORATION AGENT

Mixing: "Restore" should be mixed with hot water. Mix 1/2 to 1 pound of "Restore" per 1 gallon of hot water and stir vigorously until completely dissolved. Restore works by oxygenation and should not be mixed with water until the operator is ready to perform the job.

Application: There are several ways in which "Restore" can be applied. For large areas we recommend a 115 volt or 12 volt SHURflo pump. When using a pump-up sprayer you should exercise caution since this product generates it's own oxygen resulting in internal pressure build-up in an enclosed container. Apply heavy coat to the area to be cleaned.

Dwell Time: Initial Coat - Spray onto surface and allow to stand for approximately 15 minutes. Rinse lightly before the brightener coat is applied.

Brightener Coat: After the initial process is complete apply a second coat (brightener coat) and allow to stand for another 15 minutes and rinse well with low to medium pressure (1000 to 1500 P.S.I.)

First Aid Measures

Eye Contact: Immediately flush eyes with flowing water for at least 15 minutes, holding eyelids apart to irrigate thoroughly. If irritation persists get medical attention.

Skin Contact: Immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing. If irritation persists get medical attention.

Inhalation: Remove to fresh air. If not breathing give artificial respiration. If breathing is difficult, give oxygen.

Ingestion: Give 2 glasses of water. Call physician and follow recommendations given. Never give anything by mouth to an unconscious person
