

CLEANING TRUCKS

Are you taking off the paint along with the dirt?

Your Solution: **Prodigy**

Did you know that many truck cleaning products are actually **corrosive**? Sure, they wash away the surface dirt, but since they work like paint strippers, they also wash away a microscopic layer of paint.

Eventually, the result of using these caustic chemicals is a **dull looking finish**, where there used to be a bright, shiny surface. The customer wonders why his equipment seems to be aging so quickly.

But contractors who try **Prodigy by EnviroSpec** see at first glance that its superior degreasing properties are simply better at removing tough road grime. And the sparkling high-gloss finish that's left makes the entire fleet look new.

Which is probably why the major carriers clean hundreds of thousands of their vehicles with **Prodigy**, making it the number 1 selling truck wash in the country. Find out more at EnviroSpec.com/Chem_Prodigy.htm

Looking for a high-foaming alternative? New **Black Jack** is perfect for hot climates where water evaporates quickly. It also rinses faster when using hot water.

So from now on, take off the dirt—and *only* the dirt.

"Great degreaser on tractor trailers. Great job for such a small investment."
— Randall Peyton

Thanks for contributing!

When you purchase any chemical detergents from EnviroSpec, the profits we make go to great causes such as **children's hospitals** and career opportunities for **veterans**.

Plus over the last 7 years, our chemical customers, through their purchases, have made it possible to spay and neuter over **3500** animals, find homes for over **2600** pets, and maintain a no-kill animal sanctuary for homeless dogs and cats.

CLEANING HOUSES

Does bleach alone only handle half the job?

Your Solution: **EmulsifierPlus**

Sure, **bleach** works better than anything for cleaning mold and mildew. But it's useless for **carbon-based pollutants** such as grease, grime, exhaust residue, acid rain and oxidation.

And unfortunately, adding many common cleaning chemicals to bleach can have an explosive result.

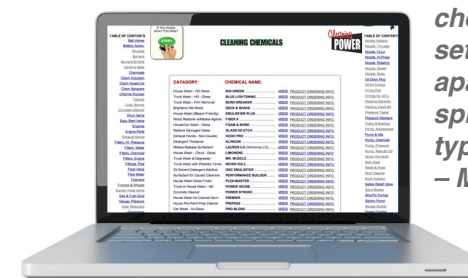

For years, **EnviroSpec's EmulsifierPlus** has been the answer for smart cleaning contractors. It works great on removing heavy build-ups of dirt and general fallout pollutants found in high-traffic areas.

It can be used alone, and it also **combines safely and effectively with bleach** (one part bleach to 4 parts EmulsifierPlus) using either hot or cold water. And with built-in gloss enhancers, you will be proud of the result.

Especially in residential areas, **environmental safety** is a prime concern. Used alone, bleach can harm lawns, shrubs and animals, not to mention siding and roofs. But mixed with EmulsifierPlus, those risks are minimized.

So if you're going to do the job, do the *whole* job. Learn more at: EnviroSpec.com/Chem_EmulsifierPlus.htm

"EnviroSpec's chems definitely set the contractor apart from the splash-n-dash type."
— Mark Mercer

Explore a world of detergents at EnviroSpec.com

If that's not enough, you'll also get a whopping **20% discount** just for ordering online. Plus in most cases, we'll pay your shipping. Head to the website for details.

CLEANING KITCHEN HOODS

Do those caustic cleaners 'eat you alive'?

Your Solution: **Hood Pro**

Corrosive chemicals can irritate your eyes, nose, lungs and skin. As you know, it's not a pleasant feeling. Repeated use can even cause permanent damage to your health. You're not getting paid enough for that.

But you may have thought that there's no alternative when attacking oily, fatty **baked-on cooking residue** in commercial kitchens.

However there *is* a terrific alternative, and it's called **Hood Pro**. The highly effective foaming action actually cleans better than the caustic cleaners, but doesn't damage surfaces like they do. Instead, it leaves a smooth, spotless shine.

Cleaning exhaust hoods and filters in busy kitchens used to be one of the nastiest jobs around. With Hood Pro, **your job just got easier**. And you no longer have to breathe in fumes that humans were never meant to inhale.

SuperFlo Polymer™ detergents: Cleaners in a class by themselves.

What is SuperFlo Polymer? It's the 'black magic' behind all EnviroSpec's chemicals. It adds so much professional-quality cleaning power to our detergents, that the only time we lose a chemical customer...is when they retire.

All chemicals are shipped in powder form, in drum packs. You could add 1/4 pound of our product to a gallon of water, **and it will still outclean** a full pound of a competitive product in a gallon of water. This means less bulk and weight to carry around. *And* less chance of running out in the middle of a job. *And* an impressive high-shine surface, no matter what you're cleaning.

Did we mention that all EnviroSpec chemicals are also **environment-friendly**? That's important to us, and we hope it's important to you too.
