Soft Wash Gun

Dial MIN for Soft-Wash
Dial MAX for Power-Wash

When the 'Soft-Wash' concept started everyone who did not have a soft-wash machine started shopping for one just so their 'soft-wash' competitors did not have an advantage.

We even thought about jumping on the 'band-wagon' and start building soft wash equipment until we realized that the only difference between a 'soft-wash' machine and the machine that you presently have is it's ability to apply chemical and rinse at lower pressure.

So we said - THAT'S KINDA SILLY! Why not just give you an item that cost less than \$40.00 that will turn your existing equipment into a much nicer and more effective soft wash machine than that of your competitors. This way you will not

only be able to 'soft-wash' a surface but you can tell your customer that since 'soft-wash' is not the complete answer to professional power washing that you - *and only you* - can cover all of their needs.

Bottom line? We have seen people pay upwards around \$30,000.00 for soft-wash equipment that at best can only give your 300 PSI and maybe 8 GPM. The Allison Soft-Wash Gun can do the same thing by using a simple 'thumb dial.'

#2900 Permissible to 9 GPM & 4100 PSI
