

Deck and Shake Brightener

One of the most often overlooked safety performance functions for most Professional Contract Cleaners is that of Neutralizing Wood Surfaces after they have been cleaned. More often than not an excessively strong alkali detergent bed has been introduced to the substrate in order to kill mold and mildew. Left un-neutralized it will surely damage the wood by destroying years of it's life.

Further, with the strong alkali beds after the cleaning process you will notice that the wood has darkened substantially. Typically you can expect the darkening to reverse itself after 5 to 10 days but you should never expect it to be as bright as it once was simply because the alkali has penetrated deep into the wood. Deck & Shake Brightener quickly starts reversing this action. Typically, the darkened surface will be back to normal in 1-4 days. If not, you should re-apply the product. The last thing you want is an un-happy customer or a lawsuit. Right?

Composition: Deck & Shake Brightener is a unique blend of wood brightening acids and surface safe surfactants specifically designed to penetrate the surface and neutralize highly built alkali detergent beds while returning the surface to a "like new" appearance.

Deck & Shake Brightener is sold in 5 & 35 pound containers and will yield approximately 1 gallon of solution for every 1/2 to 1 pounds of product.

CRYSTALS

5 Lbs of Powder makes 5-10 Gal.

35 Lbs of Powder makes 35-70 Gal.

Incredible Product for
Cedar Shakes, Decks & Docks
