## Premium Hose Reel Hose & Tank to Equipment Hose

**FIGURE 'A'** is what a healthy, non-collapsing hose looks like. The advantages are: When on a hose reel the first few layers will not 'mash down' and restrict the flow of water from the source to you supply tank. Also, when you use this hose to feed water from the supply tank to the machine the heat will not make this hose become 'spongy' and restrict water flow.

**FIGURE 'B'** is what is found on 95% of all the hose reels in the country. It too is a premium grade industrial water hose that is 50 times the quality of the typical water hose you will find in a 'high end' hardware store. This is the same hose I had to live with for 15 years as a Mobile Washer and it was not fun. It took forever to fill my supply tank for obvious reasons.

PART #	DESCRIPTION
3415	150' with Crimped GH Connector & Strain Relief. Other end open.
3420	300' with Crimped GH Connector & Strain Relief. Other end open.

Comes with 'crimped on' faucet connector with 'strain relief'. The other end is open so it will attach to a barb on the reel.
