

Release

Specifically developed for the House - Truck & Bus Washing Industry Non-Caustic with Carbon Release Solvents & Gloss Enhancers

Release is a professional strength alkaline detergent that is highly recommended for washing busses, airport shuttles, and like transportation related vehicles. This product is also useful for a variety of other cleaning applications.

Field tests proved Release to be valuable in the House, Truck, and Bus Washing Industry where high concentrations of carbonaceous, fallout pollutants are typically found. Formulated with carbon release activating solvents, gloss enhancers, and rinse aids, Release makes light work of difficult cleaning jobs.

Release is considered a medium to heavy duty, non-caustic detergent concentrate. When used properly it is safe for use on vinyl, aluminum and wood substrates.

Release exhibits excellent wetting, chelating, rinsing and emulsification properties. Its ability to hold pollutants in suspension during the wash process makes it an ideal product when using cold or hot water systems. The unique Activator in Release quickly removes oil/grease pollutants from the substrate.

Release comes packaged in a two- part system. One part is approximately forty (40) pounds of Release Base Product. The second part is one gallon of Release Activator. The two combined will make 55 gallons of a super concentrate.

PH: 11.6-11.8

Caustic: No

Degreaser: Yes

Phosphates: Yes

Color: Red

Scent: Cherry

Rinsing: Very good

SuperFlo Polymer: No

Packaging: One 40 lb carton of powder with one gallon of liquid additive that will yeild 55 gallons of liquid detergent concentrate.

55 Gallon Professional Kit
Weight 50 lbs.
